Paper-style mean aligned schematic

Observed representative steps (near median target window)

Wait / sync (light grey), Prepare (dark grey), Target pre (dark red), Target post (purple), Final logits (yellow), Accept (pink), Postprocess (dark grey), Unlabelled gap (light grey), Context (teal), Proxy / launch (orange), Proxy compute (orange), Commit (purple), Miss draft (red), Previous P2 (light blue), P1 (blue), P2 (cyan), Target ready (dashed line), Proxy received (dotted line)

Stage means are diagnostics, not final TPS. Proxy side-stream work is a separate lane, never added to the target stack. Blank timeline gaps are retained; no common hit/miss compute cost is imposed. Cross-GPU times use recorded CPU/CUDA anchors.
